

CAUTION

Wear eye protection.

Wear gloves.

Keep away from the reach of children.

ATTENTION

Do not use for purposes other than sharpening knives. Doing so may result in injury.

Do not use too much force when sanding. Doing so may result in injury.

Do not use in a distracted state.

FEATURES

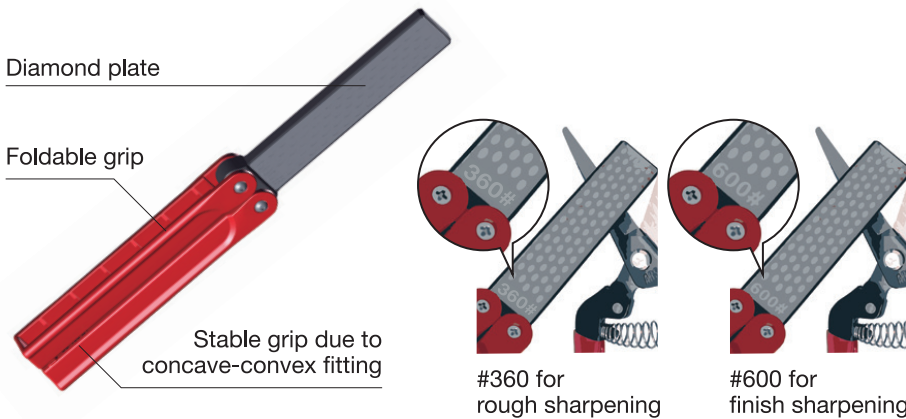

From rough to finish sharpening

The roughness of the sharpener is different on both sides, allowing rough sharpening at #360 and finish sharpening at #600, by a single tool!

The concave-convex fit at the bottom of the grip stabilizes the grip and transmits power without waste.

Easy to store and carry

Foldable cover design protects the diamond plate and makes it easy to carry.

USAGE

1) Bring out the diamond plate

Open the folding grips to both sides to release the diamond plate and grasp the grips firmly.

3) Remove dirt

After use, rinse the diamond plate with water to remove dirt and wipe dry.

2) Sharpen

Align the diamond plate with the angle of the blade. While maintaining the angle, sharpen the blade. After sharpening one side, sharpen the other side in the same manner.

4) Storing the diamond plate

Fold the grips from both sides to store and protect the diamond plate.
